

REWEAR

Reconnecting a Fragmented Clothing System in Bangladesh

Turning Fragmentation into a Functioning System

Bonnie, Deanna, Teralyn
Group 3

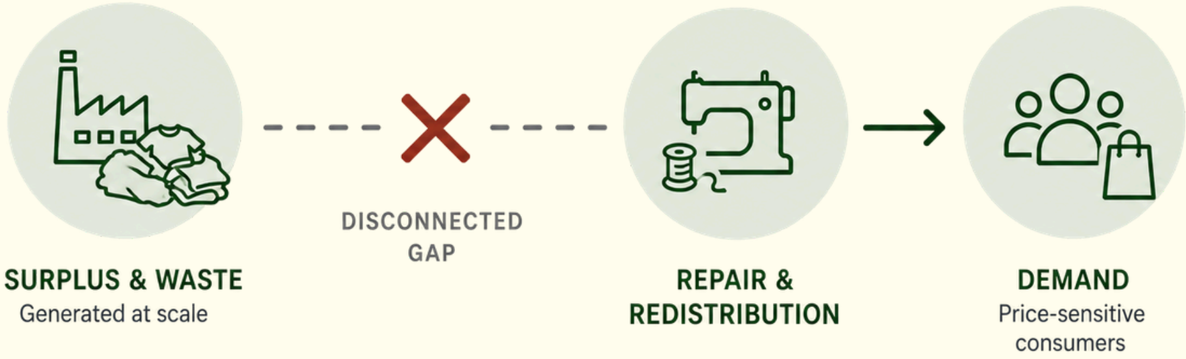

Executive Summary

The challenge in Bangladesh’s clothing market is not resource scarcity, but structural fragmentation.
Large volumes of garments are produced and discarded, but are not effectively reintroduced into the system.

Country Opportunity

Bangladesh presents a set of conditions that directly shape the feasibility of the ReWear model, particularly in relation to supply, labor, consumer behavior, and infrastructure.

Supply & Industry Conditions

- One of the world's largest garment manufacturing hubs
- High volumes of surplus inventory, defective items, and post-consumer clothing
- Creates a consistent and scalable input supply for the system

Labor & Operational Capability

- Strong base of tailoring and repair skills
- Large, cost-effective labor force
- Enables garments to be restored and recirculated at affordable price points

Cultural & Consumer Behavior

- Second-hand clothing may carry social stigma in visible consumption
- However, adoption is conditional, not rejected
- Users are more willing to engage if the system is:
  - discreet
  - convenient
  - positioned as practical

Existing Behavioral Foundation

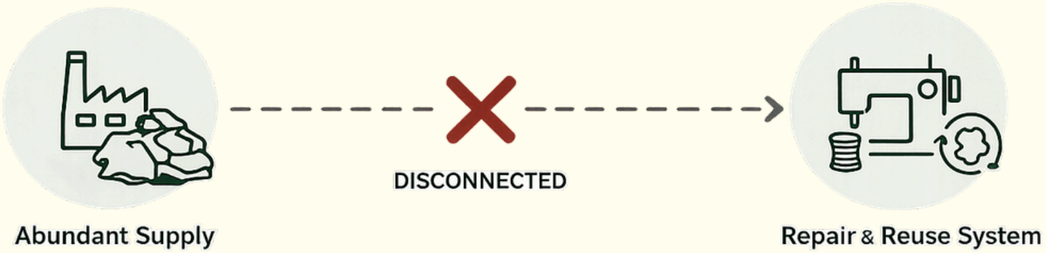

- Repair and tailoring are already widely practiced behaviors
- Extending garment life is culturally familiar
- The barrier is not behavior, but lack of system-level coordination

Customer and Market Need

A disconnected system prevents existing supply, labor, and demand from functioning efficiently

Market Structure

- The market is defined by system-level inefficiency, not a single product category
- Large volumes of garments exist across surplus, second-hand, and post-consumer flows
- No coordinated system to manage reuse, repair, or redistribution

Target Customer

- Urban, price-sensitive consumers
- Seek affordable clothing options
- Lack access to reliable and convenient alternatives beyond buying new

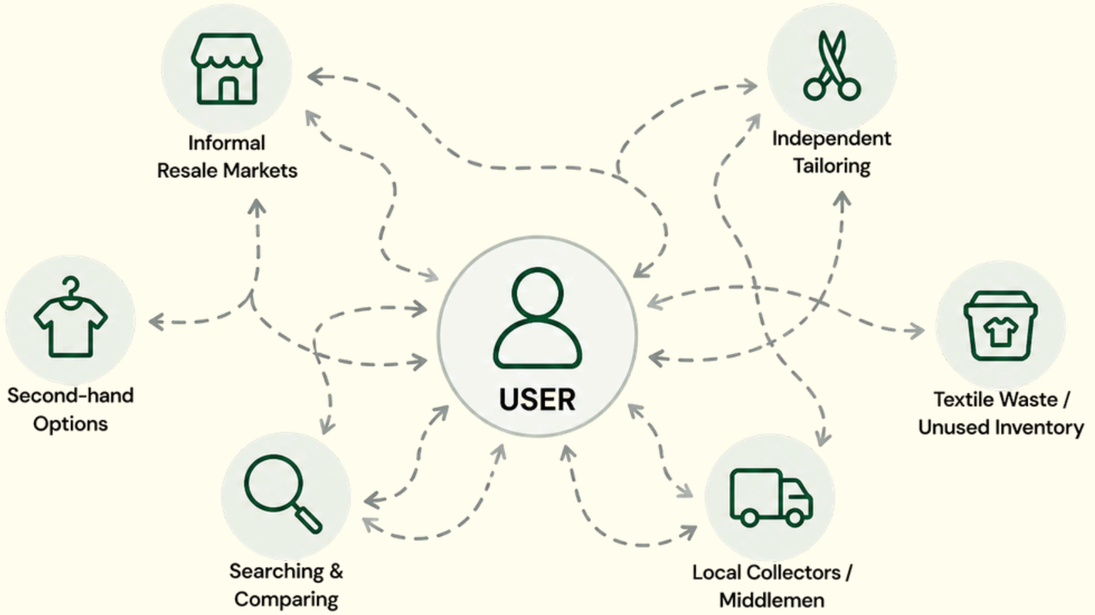

Customer and Market Need

A disconnected system prevents existing supply, labor, and demand from functioning efficiently

Existing Alternatives

Supply–Demand Disconnect

ReWear Solution

HIGH EFFORT, LOW BENEFIT → NO PARTICIPATION

Value is lost at every stage of the clothing lifecycle.

Users are forced to navigate the system themselves

Competitive Landscape

- **The landscape is defined by fragmented activities, not a dominant competitor**
- **Existing players address parts of the lifecycle, but no integrated system exists**

Informal Resale Markets

Tailoring & Repair Services

Recycling & Waste Initiatives

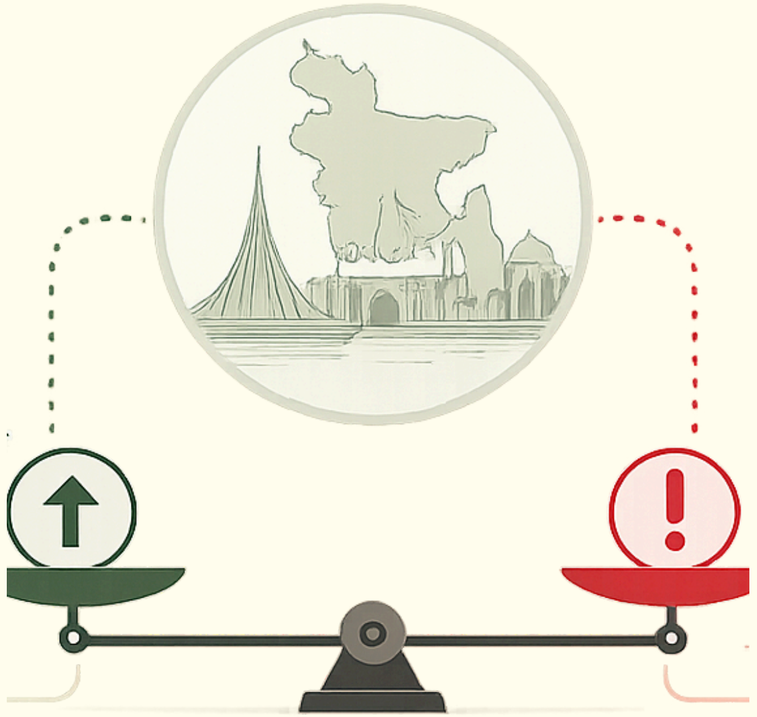

Fragmented Ecosystem with no coordination

- The issue is not lack of activity, but lack of coordination
- Each player addresses a single function → no connected value chain

Country Risk / Reward

Opportunity

- Strong alignment of supply, labor, and demand
- Continuous flow of garment surplus and post-consumer clothing
- Low-cost labor + established repair capabilities
- Growing base of price-sensitive urban consumers

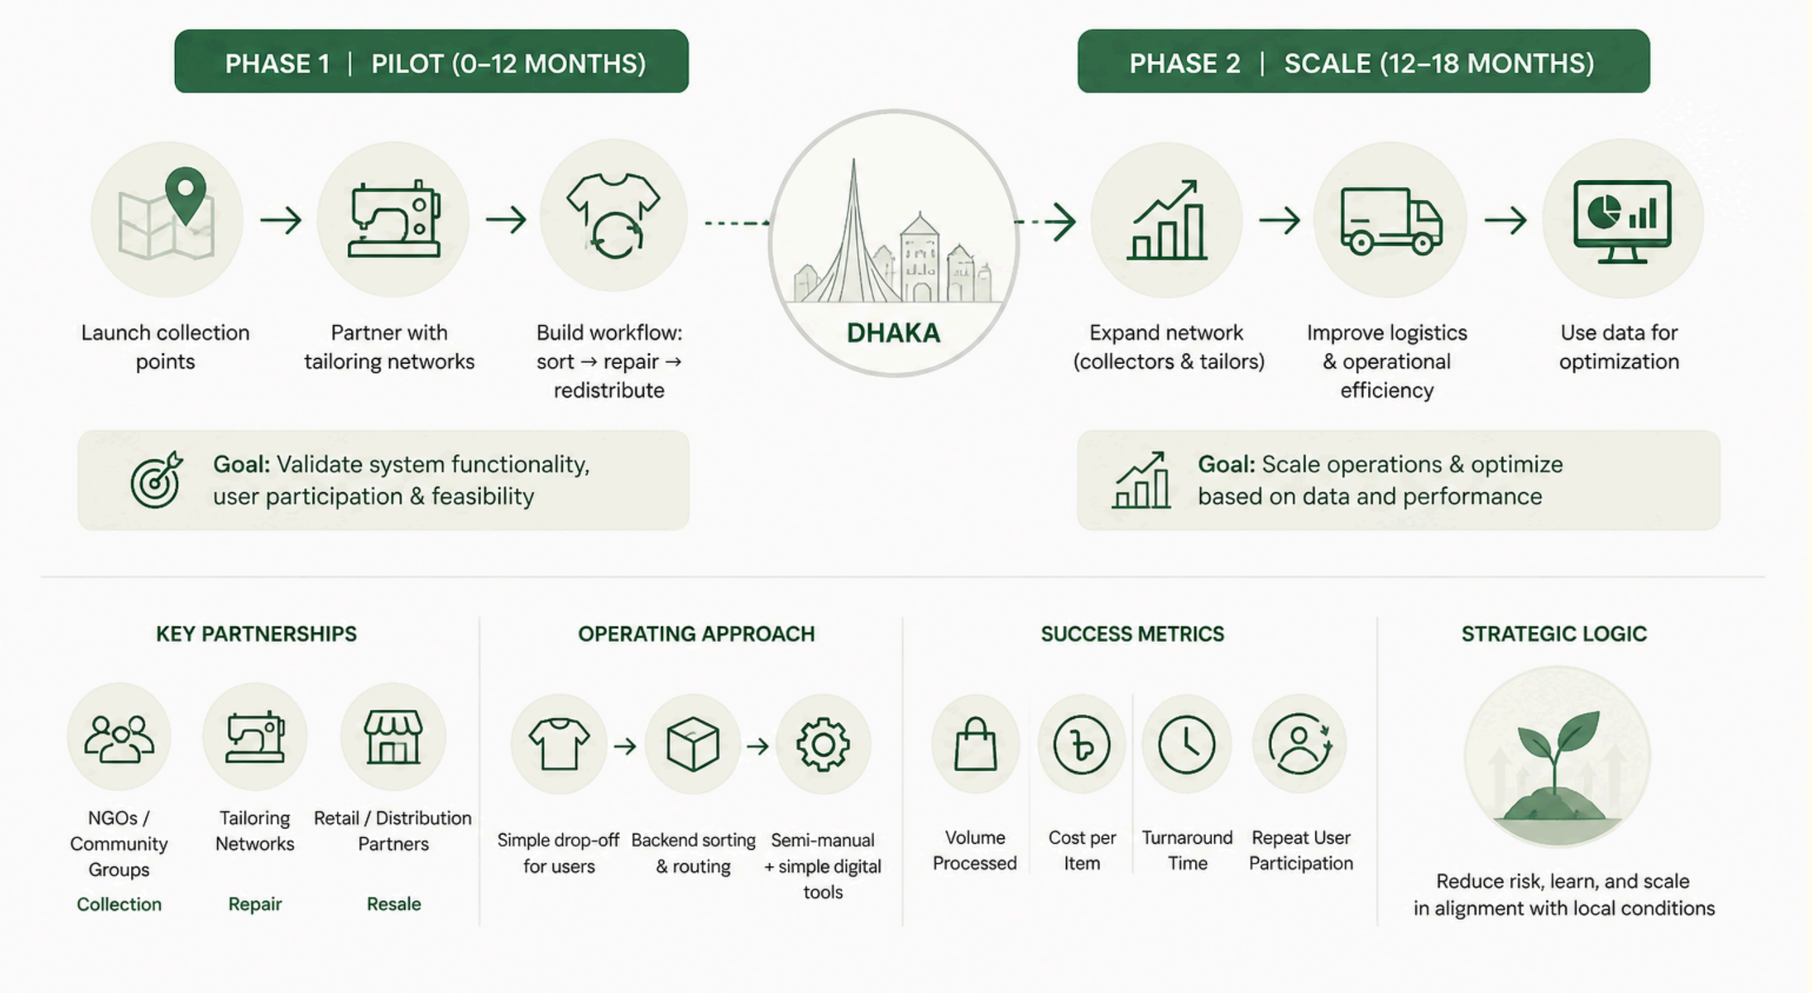

Key Risks

- Cultural stigma around second-hand clothing
- Fragmented logistics and uneven digital access
- Regulatory uncertainty in informal and waste sectors

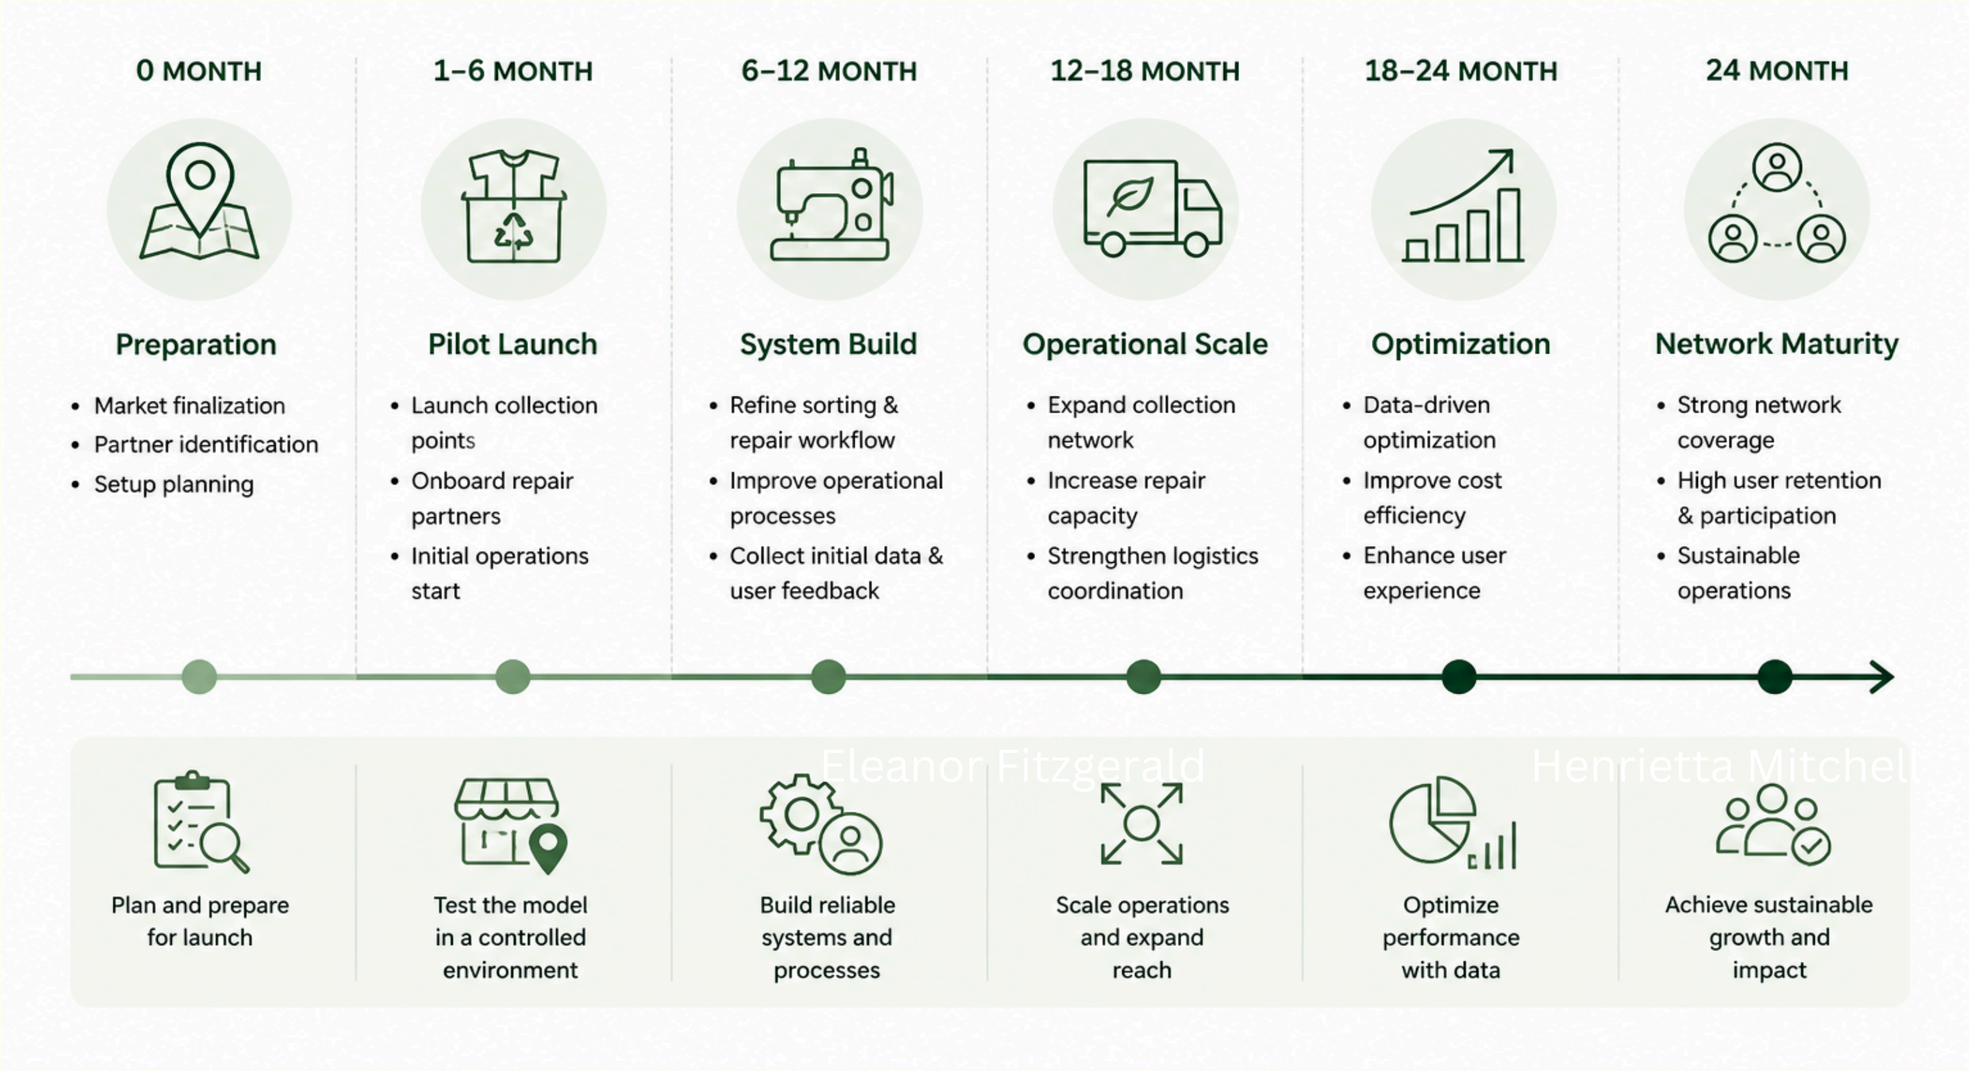

ReWear
RECONNECTING A FRAGMENTED CLOTHING SYSTEM

Recommended Entry Strategy

- **Entry strategy: phased pilot approach starting in Dhaka**
- **Focus on testing the system before scaling**

Launch Plan / Milestones

Operating Model

System Overview:
ReWear operates as a coordinated, end-to-end system;
Integrates multiple stages into a continuous clothing lifecycle flow;
Hybrid model: physical operations + lightweight digital coordination

Input — Collection

- Garments enter through physical collection points
- Basic data recorded: type, condition, source
- Creates initial data layer for downstream decisions

Processing — Sorting & Classification

- Items sorted based on condition and value potential
- Routed to: resale / repair / recycling
- Supported by human judgment + simple AI-assisted classification

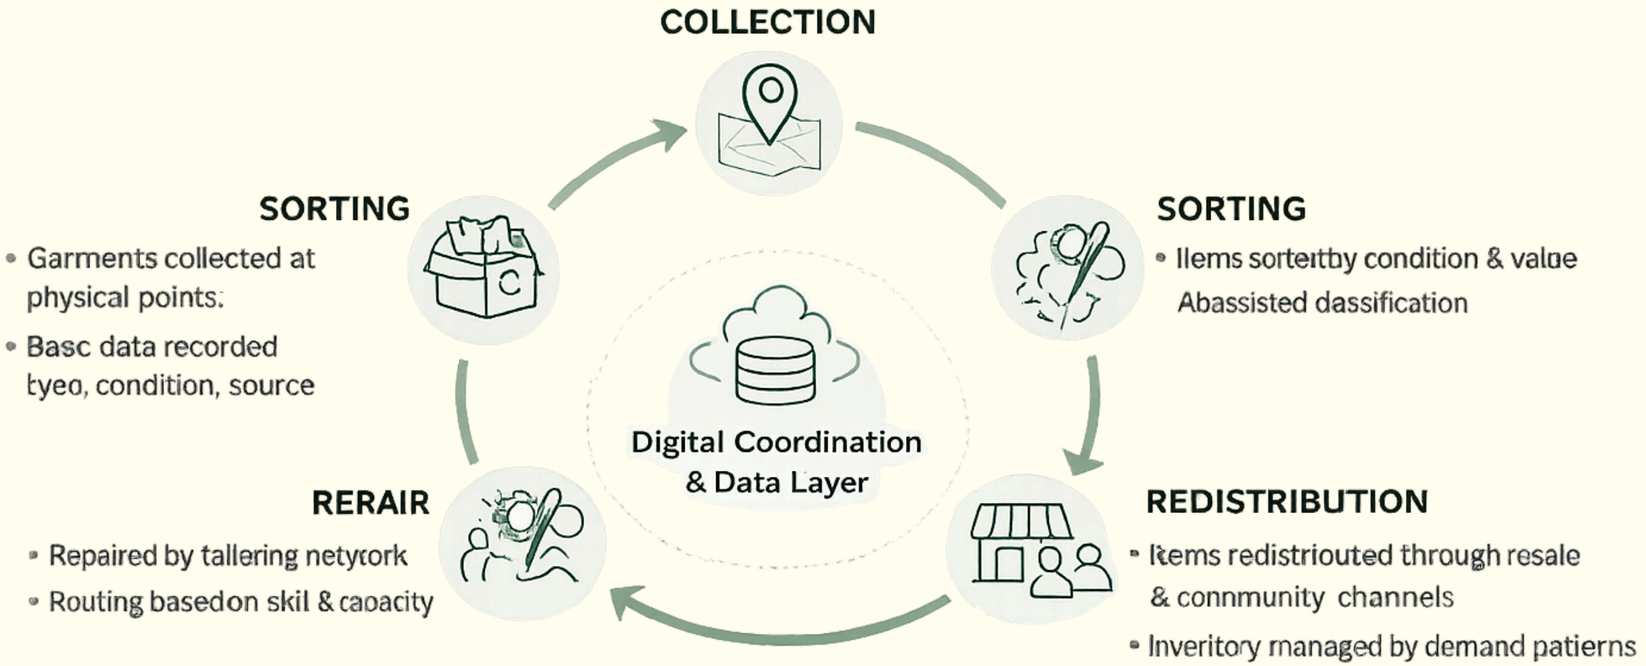

Repair — Distributed Network

- Operates through local tailoring partners
- Routing based on skill, location, capacity
- Tracks repair status, cost, and turnaround time

Output — Redistribution

- Garments distributed through resale and community channels
- Inventory managed based on demand patterns
- Items directed to where they are most likely to be used

Operating Model

Hybrid Model
Physical + Digital

Data Driven
Enables intormed Des sions

Local Networks
Talloring & Distripution

Focused AI
Improves sorting & Fouting

Digitau Scalable,
and Adapted to local contect

Ethics / Governance / Risk Controls

ETHICAL OPERATION IS CRITICAL TO TRUST, ADOPTION, AND LONG-TERM SUSTAINABILITY

Data

Data & Privacy

- Collect only necessary operational data
- Ensure data is secure, limited, and purpose-driven
- Maintain transparency in how data is used

Trust

User Trust & Transparency

- Provide clear information on garment condition and pricing
- Maintain consistent processing standards
- Position system around quality and practicality, not stigma

Labor

Labor Conditions

- Ensure fair compensation and clear task allocation
- Support reasonable working conditions
- Avoid reinforcing informal labor inequalities

AI

Accountability & AI Use

- Ensure decisions are explainable and monitored
- Apply oversight to classification, pricing, and routing
- Use AI as support, not uncontrolled decision-maker

Financial or Strategic Logic

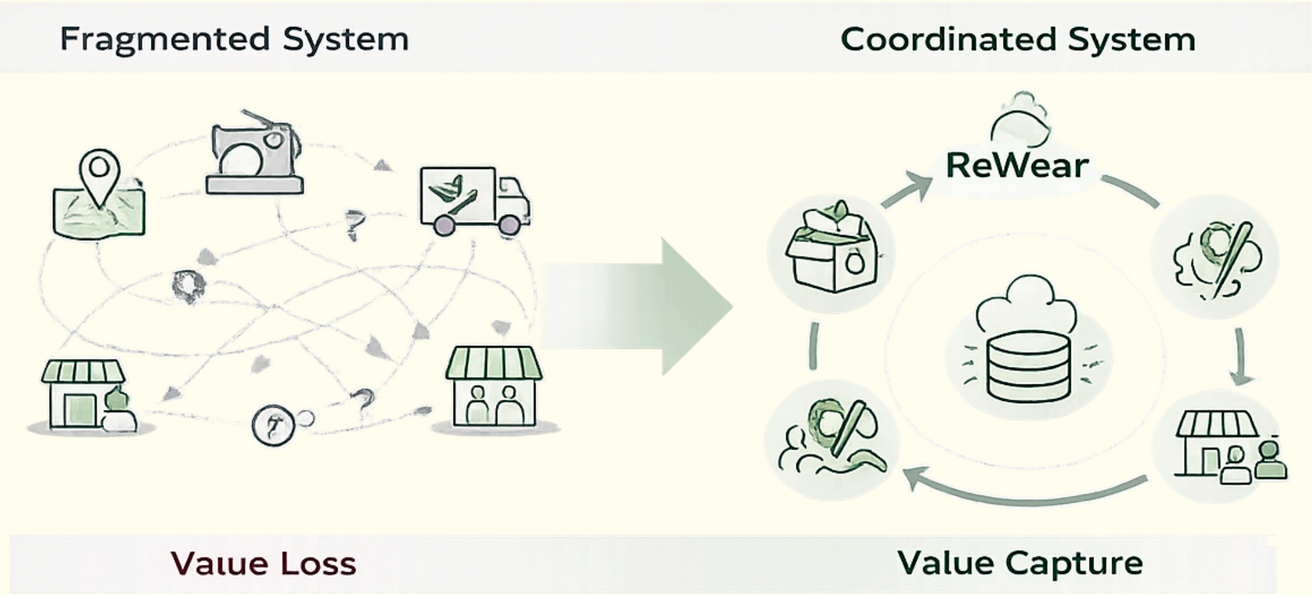

ReWear creates value by capturing inefficiencies in an uncoordinated system, transforming a fragmented market into a coordinated, scalable system

Cost Advantage

- Low labor costs enable economically viable repair and redistribution
- Utilizes existing infrastructure → reduces initial capital requirements

Value Creation

- Converts waste and surplus into usable inventory
- Extends garment lifecycle → increases total value per item
- Reduces loss across the system

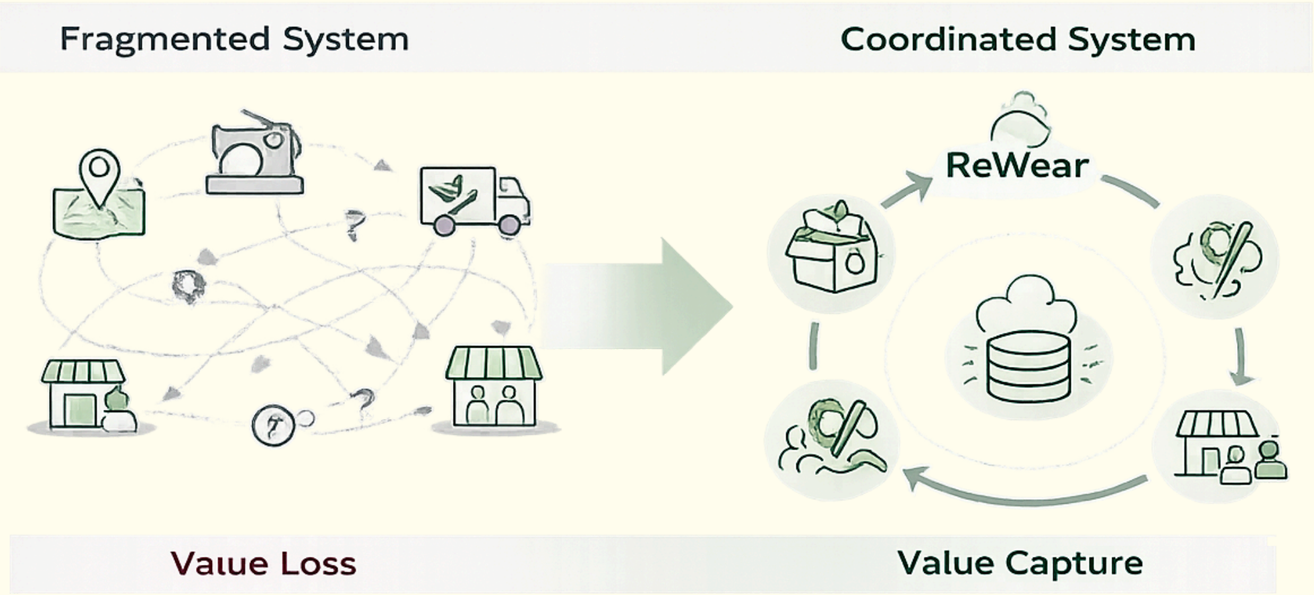

Financial or Strategic Logic

ReWear creates value by capturing inefficiencies in an uncoordinated system, transforming a fragmented market into a coordinated, scalable system

Market Fit
- Strong demand from price-sensitive consumers
- Aligns affordability with accessibility

Operational Efficiency
- Data improves routing, pricing, and inventory decisions
- System reduces friction → increases participation

Scalability
- Built on existing local networks (tailors, resale, collection)
- Can scale without heavy infrastructure investment

ReWear

RECONNECTING A FRAGMENTED CLOTHING SYSTEM

REWEAR

TO TRANSFORM FRAGMENTED CLOTHING SYSTEMS INTO COORDINATED, ACCESSIBLE NETWORKS THAT EXTEND VALUE, REDUCE WASTE, AND IMPROVE EVERYDAY ACCESS TO CLOTHING.

THANK YOU
